

ANSWER SHEET EVALUATION (STRENGTHS & GAPS)

Date: 4/4/2026

Student Name: Anshul

Marks: 26/30

Percentage: 87%

Grade: A2

Strong Areas

- **Hydroboration-Oxidation:** The student provided detailed explanations regarding hydroboration-oxidation, including its reagents and the mechanism. This showcases a clear understanding of the topic.
- **IUPAC Nomenclature:** The student successfully identified the IUPAC names of the given compounds, displaying strong skills in nomenclature.

Needs Improvement

- **Distinguishing Test for Alcohol and Phenol:** The explanation provided for the distinguishing test lacks clarity and detail. The student should ensure to include observations and reasoning for better understanding.
- **Hydroboration-Oxidation Reaction:** Although the student described hydroboration-oxidation well, the inclusion of specific examples or diagrams would enhance the answer further.

Actionable Feedback

- **Clarification on Reactions:** Review distinguishing tests for functional groups, focusing on detailed observations and outcomes to strengthen your overall grasp of organic reactions.
- **Diagram Practices:** When explaining reactions, incorporate reaction mechanisms or flow diagrams to visually represent the transformation and improve conceptual clarity.

Overall Performance

ANSWER SHEET EVALUATION (STRENGTHS & GAPS)

The student has demonstrated a solid grasp of concepts in the subject of Chemistry, particularly in the synthesis and behavior of organic compounds. While most answers reflect good understanding, there are areas, especially in explaining distinguishing tests and reaction mechanisms, where greater clarity would benefit their overall performance. Encouraging the student to delve deeper into these areas and practice diagrammatic representations will enhance their comprehension and presentation skills.
