

# ANSWER SHEET EVALUATION (STRENGTHS & GAPS)

Date: 4/4/2026

Student Name: Anshul

Marks: 27/30

Percentage: 90%

Grade: A2

## Strong Areas

- **Hydroboration-Oxidation:** The student clearly explained the hydroboration-oxidation method and its application in alcohol preparation, indicating a good understanding of the concepts involved.
- **Distinguishing Test for Alcohol and Phenol:** The answer provided a detailed and correct explanation of the color changes observed during the ferric chloride test, correctly identifying the reactivity of phenol vs. alcohol.
- **Chemical Reactions for Preparation of Phenol:** The reactions showing the preparation of phenol from cumene and chlorobenzene were illustrated properly, demonstrating an understanding of synthetic pathways.

## Needs Improvement

- **Boiling Points Comparison:** While the concept is correct, the method of calculation for molecular weights should be clearer to strengthen the argument supporting the boiling point differences.
- **IUPAC Naming:** The IUPAC names were provided correctly but could be elaborated on to ensure full comprehension of naming conventions.

## Actionable Feedback

- **Clarification in Explanations:** Focus on providing clearer step-by-step calculations when discussing molecular weights and boiling points to enhance clarity.

# ANSWER SHEET EVALUATION (STRENGTHS & GAPS)

- **Practicing IUPAC Names:** Spend more time practicing IUPAC naming rules to improve confidence and recognition in future assessments.

## Overall Performance

The student demonstrated a solid understanding of organic chemistry concepts, particularly in distinguishing between alcohols and phenols, as well as preparation methods for phenol. However, minor improvements in clarity and detail in certain areas, such as boiling point comparisons and IUPAC naming, could yield even better results. Overall, the performance is commendable, showing both knowledge and effort.
