

ANSWER SHEET EVALUATION (STRENGTHS & GAPS)

Date: 6/4/2026

Student Name: Anshul

Marks: 27/30

Percentage: 90%

Grade: A2

Strong Areas

- **Hydroboration-Oxidation:** The student provided a clear and detailed explanation along with the mechanism and reagents involved, demonstrating a strong grasp of the concept.

Needs Improvement

- **Preparation of Phenol from Cumene:** The answer lacked a complete description and clarity in the reaction mechanism leading to the formation of phenol from cumene, which is crucial for full understanding.

Actionable Feedback

- **Reaction Mechanisms:** Focus on providing clear, step-by-step mechanisms for chemical reactions, ensuring all reagents and intermediates are mentioned.
- **Depth of Explanations:** Aim to give more detailed explanations for concepts such as boiling point differences, connecting the physical properties to molecular structure.

Overall Performance

The student demonstrated a good understanding of key concepts in organic chemistry, particularly in distinguishing between alcohols and phenols and detailing the hydroboration-oxidation process. However, responses could be improved by providing more thorough reactions and explanations for synthesis-related questions. It is recommended to focus on clarity and detail in reaction mechanisms for better comprehension and scoring in future assessments.
